RECEIVED
AUG 28 1980
DIV. OF HAZARDOUS MATERIAL
AND WASTE MANG

Attached are two chain of custody forms regarding waste streams generated by the Ford Motor Company at the Valley of the Drums.

1. Sample # LWS-3: This is a composite sample taken from both holding tanks on site containing the batched liquid solvents from the Ford drums. (NOTE: Because some questions arose as to the representation of the two previous LWS samples, a sample taken from the total solvent batch was requested.) Both Lead and Chromium content, and a halogenated hydrocarbon scan was requested for this sample.
2. Sample # WTR-1: This is the composite sample representing all "contaminated water" on site drawn from Ford drums. Lead, chromium and non-halogenated hydrocarbons were requested for this analysis.

NOTE: This was due to the evidence from the past LWS samples showing Pb and Cr contamination, and the lack of halogenated hydrocarbon presence within the analyzed materials.

Both samples were taken to Louisville Testing Laboratory, Inc.
